Back-end developer

Software for all customer-facing roles

Duration: 10 month

Industry: Business

Technologies: Python, Postgres, ArangoDB, RabbitMQ, Docker, Scrapy, NewsPlease, NewsPaper

Description: It provides actionable insights for every business interaction by collecting and analyzing information from all over the web and from internal data sources. Based on all this info, the service provides you with must-know information for your meetings: the ice breakers you should use, the things you have in common, and much more in order to boost the interaction and make you better at what you do - more confident, proficient, and professional. There are only relevant news articles and anything important regarding the person you are meeting and the company he works for.

Scope of work:

- Writing new article and graph boosters
- Adding transactions, transforming and syncing data from
- Postgres to ArangoDB
- Fixing issues and writing tests.

Back-end developer

Service API connection plugins

Duration: 9 month

Industry: SaaS, Compliance management

Technologies: Python, HTTP REST

Description: Plugins that connect to different web and cloud-based services' APIs and retrieve data that's used for evidence collection and visualisation, compliance management, interactive auditing, etc.

Scope of work:

- Developing new plugins to connect different APIs(AWS services, Snyk, HiBob, etc)
- Rewriting old plugins to fit the new architectural requirements

Back-end developer

Educational platform

Duration: 14 months

Industry: E-learning

Technologies: Python, Django, BigBlueButton, Twilio, Celery, Redis, Stripe, JS, React, Redux, HTML/CSS

Description: It is an online platform for finding tutors and conducting online lessons. Due to the possibility of individual and group learning, it can be an addition to school learning or a method for its implementation. Tutoring has always been in demand, but during the pandemic, there was a need not only to develop platforms for online learning but also to expand the functionality of existing ones. It was our aim – to make online learning a convenient process for both tutors and students. The platform is available for use worldwide.

Scope of work:

- Implementing new features
- Fixing bugs
- Manage the project, closely communicate with the customer

Back-end developer

Travel application

Duration: 13 month

Industry: Travel Service

Technologies: Python3, Django, Django REST Framework, PostgreSQL, Sendgrid, Crontab, Angular, JS, Sass.

Description: It is a booking system that provides information about different destinations and enables a user to book a unique travel tour online. You can select destinations according to duration, date, price, proximity, etc. Each tour comprises information about Departure & Return, Cancellation Policy, ways of payment. Also, the user can see various photos from the location and read/ add reviews about the tour. User can log in with both Facebook and Google account, save bookings and pay directly. The app is available in 36 languages and has an exchange rate integration of 17 currencies.

Scope of work:

- Developing from scratch
- Currency API integrations
- Stripe API payment system integration

Back-end developer

Scratch map for travelers

Duration: 15 month

Industry: Entertainment

Technologies: Less, JavaScript, React, Python, Django, PostgreSQL, Stripe, Google/Facebook APIs

Description: It is a mobile application to track users' trips. It is possible to indicate visited cities, transport, dates, and others. The feature of automatic calculation of distance is very helpful. You can see your covered distance and other details. Also, this application is great for interacting with friends, because you can invite them to your trip. It is possible to upload photos that make your memories more vivid.

Scope of work:

- Adding all necessary functionality
- Fixing Bugs

SUMMARY

5+ years of experience as Backend Developer.
