Lviv, Ukraine

**Ruby on Rails Developer**  
StarApps  
*October 2017 - April 2019*  
Lviv, Ukraine

## PROJECTS

### **NDA – Tool for companies which are huge developers in the USA**

On the project we had a team of about (15 programmers frontend and backend) + 4 QAs + 2PMs. We had clear flow through Jira which helped us to provide stable code. No one ticket will go to master without code review and approval from a teammate. On this project I've got great experience to work with a big team and provide high quality code with tests coverage. I developed new functionality, made code refactoring, additional test coverage and bugfixing.

### **Nadofix**

I developed structure of database and relation, worked with docker, wrote services to find a specialist or an expert or two to repair or diagnostic equipment according to the criteria, working with sidekiq, made authentication via facebook, linkedin, twitter, made global filtration, configure sendgrid, deploying, change domain, etc. Experience with graphql, covered whole project by tests.

### **Experience people**

A job search platform that provides trilingualism. The opportunity for companies or employers to register and publish vacancies, and for job seekers to filter offers, respond to the vacancy, and if they do not find a suitable one, subscribe to the newsletter

according to the selected filters. Companies have their own account in which they publish vacancies, receive notifications about the response to the vacancy and a page of tariff plans with a monthly subscription.

**CMA**

Website for the company of equipment repair, which has more than 200 pages, tracking the status of repair, blog, the ability to leave a comment about the service.

**Software as a Service (SaaS)**

E-commerce platform where everyone can register, create their own online store in a few clicks, a unique subdomain is created for each user.

**Real estate projects**

Projects for construction companies. Which provide convenient filtering, creating projects and apartment plans from the admin panel. Added a telegram bot that receives notifications about questions left on the site.

**SUMMARY**

Strong self-disciplined and willing to improve my skills constantly. Responsible, positive, creative, hardworking, team player. Looking for an opportunity to take part in interesting project, learn new technologies and become a part of experienced team.

I have a number of skills, which help me write good stable code that is extensible and easy to understand. I have experience working in both small and large teams. Also I write code with good test coverage and can solve complex problems independently. There is experience of managing the project independently. I communicate freely with English-speaking clients or colleagues.

**IHR ANSPRECHPARTNER**
